360 Degree Flexible Fiber Optic Borescope at an Affordable Price

- Full 360 degrees of rotation for complete visual inspections
- Measures just 4mm (.157") in diameter
- 28 inch length allows for snaking into tight areas
- Waterproof and resistant to oil and fuel
- 17,000 fiber optic pixels produce a high resolution image
- Offers a bend radius of 30mm (1.18")
- Includes high intensity portable LED light source, carrying case and 90 degree viewing adapter

The Lenox Instrument Twist-A-View Borescope is designed to provide true 360 degree inspections of tight, restricted areas with a simple twist of the scope. Both flexible and versatile, the Twist-A-View Borescope represents a professional quality optical inspection tool at an affordable price.

The 360 degree rotation is made possible by a 90 degree right angle viewing adaptor coupled with an achromatic eyepiece to provide a crisp image covering the entire field of view. High resolution is produced by 17,000 fiber optic pixels, delivering an image nearly equal in quality to those produced from optical rigid borescopes.

At just 4mm (.157") in diameter, the 28 inch Twist-A-View Borescope can be snaked into tight locations requiring visual inspections including turbine, gas or diesel engines, combustion chambers, pumps and valves, pipelines, tubing, castings, machined parts and other hard-to-access cavities. It is both waterproof and resistant to oil and fuel.

Further enhancing the Twist-A-View's visual inspection capabilities is a portable, battery operated LED light source. The LED delivers a bright white light at 5500 degrees Kelvin with a light intensity of 20,000 lux to illuminate even the darkest areas.

Every Lenox Twist-A-View Borescope includes a 90 degree viewing adapter, carrying case, portable LED illumination and an extension cable for the LED light source. Video and digital still camera packages are available.

Twist-A-View Borescope, Portable LED and Carrying Case

Diameter	Length	Stock #	Description
4mm (.157")	28"	6800SFK-720	360° fiberscope Includes: LED, light cable, carrying case

Lenox Instrument Company has been providing visual inspection instruments to the defense, power generation and manufacturing industries since 1920. Offering a full line of visual NDT borescopes, endoscopes, videoscopes and high temperature camera systems, Lenox products are renowned for their rugged and innovative style.

From the 1920 invention of the first industrial borescope, to the first borescope used at a nuclear site, to the internal inspection of today's jet engines, Lenox Instrument Company has always offered the highest quality and broadest range of remote vision instruments to satisfy our customer's most stringent needs.
